

Why the Harrison Substation is needed:

- The three existing substations that serve the area (Roberts, East Loop, and Spanish Trail) are operating at or above capacity.
- The substation would improve electric service reliability for our customers and reduce unplanned outages.
- The substation would accommodate anticipated future growth in the area.
- The need for a substation in this area has been identified in TEP's 10-year Transmission Plan, filed with the Arizona Corporation Commission (ACC).
