

Resource Sensitivity Levels Overview (continued)

- **Moderate-high:** potential resource constraints are present, but conflicts or issues would likely be reduced with conventional and non-conventional design or mitigation measures (e.g., recreation areas, plat-approved residential areas)
- **High:** potential resource constraints are present where there are unique, highly valued, complex, or legally protected resources; or where conflicts or issues would be more difficult to avoid or reduce with the conventional and non-conventional design or mitigation measures (e.g., existing residential development)
- **Incompatible:** potential resource constraints are present where agencies have an adopted management plan or regulatory guidelines that identify transmission lines as incompatible or in conflict with existing or future resources (e.g., designated wilderness areas)
